Fosshub 2016-08-03 compromise time window?

MartinDK

Aug 2016

Hi guys,

I was recently made aware of the Fosshub compromise.

I actually downloaded and installed Audacity 2.1.2 earlier today (2016-08-03) from Fosshub, so I'm a little bit nervous.

Using only Windows Defender, I scanned the installer before using it, as well as a system-wide scan after the news broke without anything suspicious being reported.

Furthermore, I downloaded and installed Emsisoft's Emergency Kit Scanner - which also doesn't detect any malware.

The second paragraph of your article (<http://www.audacityteam.org/compromised-download-partner/>) says "We have now replaced the 2.1.2 hacked windows installer", but the article doesn't have a timestamp, which leads to confusion.

Google search results says it is "8 hours" old at the time of writing this, and the updates at the bottom are stamped as being earlier than the time of me downloading the installer from Fosshub (I downloaded after 12:45 CEST).

Can I take this to mean, that I likely downloaded a non-hacked installer?

You mention it lasted 3 hours, but do you have the specific time window during which your installer from Fosshub was compromised? I would love to know it and help spread the word to put other people's minds at ease.

Kind regards,
Martin

#System

Windows 10 Anniversary update 64-bit (build 14393.10)

Audacity 2.1.2

Me too
